Research Hub Program

AN INTRODUCTION TO RESEARCH MANAGEMENT SYSTEM (RMS)

February 2018
Video
FEATURING PROFESSOR DAVID CHRISTIAN

Pure Perspectives
NOT AS HARD AS YOU THINK

https://youtu.be/CCFFiuHSeN4
Today’s Agenda

1. Overview
2. Why a Research Management System (RMS)?
3. The Journey
4. Who should use the systems?
5. Getting started
6. Where to go for help and information
A new Research Hub is being developed to provide an integrated solution for the end-to-end management of the research lifecycle.

The hub will house a suite of research management systems comprising of:

**Pure**
- Profiles, outputs (publications), applications & awards, activities, equipment, impact, media, prizes, patents, datasets and clinical trials.

**Component systems**
- Animal management, ethics, biosafety and other applications, online forms, contracts & legal, and IP & commercialisation

**ERA submission**
Why RMS?

BENEFITS OF THE NEW SYSTEMS

- Enable the University to attract high-profile collaboration opportunities
- Access anywhere, anytime as its web-based
- Allows our researchers to showcase their full research outputs
- Provide our researchers with increased international visibility

- Display information on grants, fellowships and tenders
- Streamlined information for the ERA submission data gathering
- Component systems that aligned/integrated to provide the end-to-end research management lifecycle
# The Journey...

## PURE AND COMPONENT SYSTEMS

Where to find information

AVAILABLE SUPPORT AND TOOLS

Research portal (find a researcher) - researchers.mq.edu.au

- Research hub - goto.mq/research-hub
- Pure Research Management System - goto.mq/myresearch

To achieve the targets set out in World-Leading Research Changing Impact, Macquarie University's Research is essential that the University continuously strives for that support the pursuit of excellence in research.

Component Systems

ETHICS, BIOSAFETY & OTHER APPLICATIONS

• **Biosafety Management** – an online solution for managing the assessment and approval of the use of biological materials associated with research and teaching protocols at the university.

• Researchers, staff and the Institutional Biosafety Committee (IBC) will use this system to manage applications, reviews and approvals of research or teaching activities that involve:
  • pathogenic or genetically modified organisms (GMOs);
  • handling animals, their tissues or body products; and
  • clinical or diagnostic samples.

• This is the first Committee to use the new **Ethics, Biosafety & other Applications** system, which in the coming months, will include application submissions and committee reviews of animal and human research ethics.

• This forms a component of the new Research Hub, a solution that supports the end-to-end research management lifecycle at Macquarie.

• Launched in October 2017
