

About

iLab

MACQUARIE UNIVERSITY'S
PERSONAL COMPUTER ON
THE INTERNET.

iLab is Macquarie University's personal computer laboratory on the Internet, enabling students to use the Microsoft Windows applications they require to do their university work from anywhere, anytime, on anything.

With temporary iLab sessions accessible from the Microsoft Windows, Mac OS X, Linux, iOS and Android operating systems, the days of being bound by physical labs are coming to an end.

[Look here](#) to see how iLab users are making iLab work for them.

To get started with iLab all it takes is three simple steps:

- [Download a client](#)
- Install it
- Launch it

Your iLab journey starts right here, right now. iLab simulates the University's general-purpose computer labs. And it is only the beginning. Future iLab releases will deliver course and unit-specific applications.

Applications on iLab

[Check out](#) the full list of applications available on iLab.
